# Cyber Resilience Act (CRA) Insight Sip Statement

The Cyber Resilience Act (CRA) is embodied in the EU regulation 2024/2847 of 23rd October 2024.

Insight SiP is a supplier of electronic modules that contain third party digital microprocessors that are subject to CRA. Insight SiP has chosen semiconductor partners that have a proven track record and road map in cyber security.

Insight SiP designs its products taking into account the requirements of CRA to provide end users with the tools to enable full compliance with the Act.

All our recent products rely on microprocessors that have been designed with Platform Security Architecture (PSA) certification in mind. The most recent products, ISP2454LX and ISP2554HM are certified to PSA Level 3. This level of platform security reduces the risks of vulnerabilities occurring.

Furthermore, our modules are designed to support firmware that can be updated securely over the air (DFU OTA). The zephyr-based firmware for the Nordic Semiconductor platforms is continually updated to improve performance and to counter any security vulnerabilities that may be discovered. The NXP products using FreeRTOS or zephyr-based firmware is similarly updated.

Insight SiP will support its customers to achieve CRA compliance by providing updates for security risks and vulnerabilities that have been flagged. Links to the counter measures proposed by our semiconductor partners will be provided on our website.
